

Lab Handout

Phase Locked Loop (continued).

Nomographs common before computers and calculators. Example in class is one that has inductance, resonant frequency, and capacitance. A straight line through the graph connects a resonant frequency with values of inductance and capacitance. Nomographs may have two or many columns/variables correlated.

May be in the 4046 data sheet. Looking through <http://www.alldatasheet.com/> to find the data sheet, but it doesn't seem to be in the data sheet. Maybe the Fairchild one (MM74HC4046). Not there either. Ended up looking for a nomograph on the Internet.

Lab

No lecture today.
